

Proxy Video Encoder Board

AG-YDX600G

This option board enables the recording of proxy files onto SD/SDHC memory cards or onto P2 cards. It supports high-quality video (QuickTime/H.264) and audio formats at low bit rates. High-quality proxy files can be used for breaking news and other scenarios benefitting from proxy workflows. Moreover, this streamlines the production workflow by allowing the editor to review the content details during offline editing.
