Power supply			Single Phase AC100V-120V/Single Phase AC200V-240V, 50/60 Hz *The maximum value of light output is limited to less than 20,000 lm when using the projector with AC100V to AC120V. However, the maximum value of light output is further decreased in following cases. – When the projector is used with a voltage lower than AC120V – When the projector is used at a location where the ambient temperature exceeds 25°C – When the Function Board is installed in the slot – When an external device is connected to the <USB (DC OUT)> terminal – When the light source is deteriorating from use or when there is dust on the optical parts

1 Measurement, measuring conditions, and method of notation all comply with ISO/IEC 21118:2020 international standards.

2 This is the value when the Zoom Lens (Model No.: ET-D3LES250) is used with power supply voltage of AC200V to AC240V. The value varies depending on the lens.

3 Average light output value of all shipped products measured at center of screen in [NORMAL] Mode.

4 Around this time, light output will have decreased by approximately 50%. IEC62087: 2008 Broadcast contents, Dynamic Contrast [3], under conditions with 35°C (95°F), 700m (2297ft) above sea level, and 0.15mg/m³ of particulate matter. Estimated time until light output declines to 50% varies depending on environment.

5 Requires TY-SB01DL Interface Board for DIGITAL LINK.

6 This is supported by the <SDI IN> terminal equipped on the projector as standard, or when the optional 12G-SDI Terminal Board (Model No.: TY-SB01QS) is installed in the slot.

7 This is supported when the optional Function Board for 12G-SDI Optical Fiber (Model No.: TY-SB01FB) is installed in the slot.

8 4K/60p signals are converted to the projector's resolution upon projection.

9 Optional wireless module AJ-WM50 only supports IPv4.

10 Average value. May differ depending on the actual unit.

11 The operating environment temperature should be between 0°C (32°F) and 40°C (104°F) if the projector is used at an altitude between 1,400m (4,593ft) and 4,200m (13,780ft) above sea level. Note that altitude of 4,200m (13,780ft) above sea level is the maximum height that the performance of this projector is guaranteed. The operating environment temperature should be between 0°C (32°F) and 40°C (104°F) when the optional Wireless Module (Model No.: AJ-WM50 Series) is attached. When the operating environment temperature exceeds the following value, the light output may be reduced to protect the projector.

– When using the projector at an altitude lower than 1,400m (4,593ft) above sea level: 35°C (95°F)

– When using the projector at an altitude between 1,400m (4,593ft) and 2,700m (8,858ft) above sea level: 30°C (86°F)

– When using the projector at an altitude between 2,700m (8,858ft) and 4,200m (13,780ft) above sea level: 25°C (77°F)

12 The type and number of the supplied power cords vary depending on the country or region where you purchased the product.

13 The Filter kit (Model No.: ET-EMF720DK) should be used under the following conditions:

– Operating environment temperature: 0°C (32°F) to 35°C (95°F)

– Operating altitude: lower than 1,400m (4,593ft) above sea level

– Power supply: AC200V-AC240V

– Set the [FILTER MODE] to [ENABLE] in the [PROJECTOR SETUP] menu → [FILTER SETTING]

The availability of this product varies depending on the country. For details, contact your dealer.

14 Refer to the Operating Instructions of the Filter Kit for how to install the Filter kit (Model No.: ET-EMF720DK) and how to replace the filter.

The availability of this product varies depending on the country. For details, contact your dealer.

Projection relationship diagram

Install the projector referring to the projected image size, projection distance, etc. Image size and image position can be adjusted in accordance with the screen size and screen position. When the Zoom lens (Model No.: ET-D3LEW201) Fixed-focal length lens (Model No.: ET-D3LEU101, ET-D75LE95) or the Fisheye Lens (Model No.: ET-D3LEF70) is used, the projection relation between the screen and the projector differs from that of other lenses.

SH	Projected image height
SW	Projected image width
SD	Projected image size
L	Projection distance
LW	Minimum projection distance when the Zoom Lens is used
LT	Maximum projection distance when the Zoom Lens is used
L1	Distance from front of projector to edge of lens

Caution

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket. Furthermore, in order to prevent it from falling down from the ceiling, use the supplied wire on the mounting bracket.

Note

Note

- The value for each projection angle of view shown in the table is the angle between the lens optical axis and the line indicating each projection angle of view.

Projection distance

The value for L (distance to screen) varies slightly within $\pm 5\%$ depending on the zoom lens characteristics.

When [GEOMETRY] is used, the image is corrected in the direction that reduces its projected size.

1 The throw ratio is based on the value during projection with the projected image size of 3.81 m (150 in).

However, the throw ratio for the following projection lenses is based on the value during projection with the projected image size of 5.08 m (200 in).
ET-D3LEU101, ET-D3LEW201.

2 When the Zoom Lens (Model No.: ET-D3LEW201), the Fixed-focal length lens (Model No.: ET-D3LEU101, ET-D75LE95), or the Fisheye Lens (Model No.: ET-D3LEF70) is used, the projection relation between the screen and the projector differs from that of other lenses. ¹ The throw ratio is based on the value during projection with the projected image size of 3.81 m (150 in).

However, the throw ratio for the following projection lenses is based on the value during projection with the projected image size of 5.08 m (200 in).
ET-D3LEU101, ET-D3LEW201.

² When the Zoom Lens (Model No.: ET-D3LEW201), the Fixed-focal length lens (Model No.: ET-D3LEU101, ET-D75LE95), or the Fisheye Lens (Model No.: ET-D3LEF70) is used, the projection relation between the screen and the projector differs from that of other lenses. For details, refer to "ET-D3LEW201, ET-D3LEU101" (page 7), "ET-D75LE95" (page 8), or "ET-D3LEF70" (page 9-10).

Calculation of the projection distance

To use a projected image size not listed in this manual, check the projected image size SD (m) and use the respective formula to calculate projection distance. The unit of all the formulae is m. (Values obtained by the following calculation formulae contain a slight error.)

When calculating a projection distance using image size designation (Value in inches), multiply the value in inches by 0.0254 and substitute it into SD in the formula for calculating the projection distance.

Lens shift range

The projector can adjust the position of the projected image within the lens shift range for each projection lens based on the optical center position of the image (standard projection position). Optical center position of the image is an image position based on the optical axis center of the projector body.

Perform the lens shift adjustment within the range indicated in the following illustration.

Note that moving the lens outside the adjustment range may change the focus.

This is because the shift of the lens is restricted to protect the optical parts.

Following illustration indicates the lens shift range when the projector is installed on desk/floor.

Note that the illustration for the Fisheye Lens (Model No.: ET-D3LEF70) does not represent the actual movement of projected image.

1 When [VERTICAL KEYSTONE] and [HORIZONTAL KEYSTONE] are used simultaneously, correction cannot be made exceeding total of 55°.

2 Only the vertical keystone correction angle can be corrected in the direction in which the projector body moves away from the screen.

Note

- When [GEOMETRY] is used, the focus of the entire screen may be lost as correction increases.
- Make the curved screen a circular arc shape with one part of a perfect circle removed.
- Adjustment range of the [GEOMETRY] items may not match the listed projection range depending on the projection lens. Use this projector within the projection range, otherwise the correction may not work.

Installable angle

Install the projector at an angle within the range shown below.

FULL 360-degree projection

Notes on projector placement and operation

- Do not stack three or more projectors.
- Do not simultaneously use both projectors when stacked on top of each other. When stacking two projectors, use only one projector at a time and make the other as a backup device. Take a measure to prevent sliding off just in case.
- Do not use the projector supporting it by the top.

- Do not block the ventilation ports (intake and exhaust) of the projector.
- Prevent hot and cool air from the air conditioning system to blow directly into the ventilation ports (intake and exhaust) of the projector.

- Do not install the projector in a confined space.
When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.

- When installing and fixing the projector on a ceiling or wall using a mount, make sure that the fixing screw or power cord does not come in contact with metal section inside the ceiling or wall. Failure to observe this may result in electric shocks.
- Panasonic Projector & Display Corporation. takes no responsibility for any damage to the product caused by an inappropriate choice of location for installing the projector, even if the warranty period of the product has not expired.
- Immediately remove the product that is not in use anymore by asking a qualified technician.

List of compatible signals

The following table specifies the video signals compatible with the projector.

For details of SDI signal, refer to "List of single link SDI compatible signals"(page 36). "List of quad link SDI compatible signals"(page 38).

This projector supports the signal with ✓ in the compatible signal column.

1 Requires TY-SB01DL Interface Board for DIGITAL LINK.

2 The signal with 1/1.001x vertical scanning frequency is also supported.

3 YPbPr 4:2:0 format only

4 VESA CVT-RB (Reduced Blanking)-compliant

Note

- A signal with a different resolution, including SDI signal, is displayed converted to the number of display dots. The number of display dots is as follows.
 - When using the PT-HTQ20 and the [QUAD PIXEL DRIVE] is set to [ON]: 3840 x 2400
 - When using the PT-HTQ20 and the [QUAD PIXEL DRIVE] is set to [OFF]: 1920 x 1200
- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.

List of Plug and play compatible signals

The following table specifies the video signals compatible with plug and play.

Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector. For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.

List of Single link SDI compatible signals

The following table specifies the single link SDI signals that the projector can project.

This is supported by the <SDI IN> terminal equipped on the projector as standard, or when the optional 12G-SDI Terminal Board (Model No.: TY-SB01QS) or the optional Function Board for 12G-SDI Optical Fiber (Model No.: TY-SB01FB) is installed in the slot.

1 This is supported when the optional Function Board for 12G-SDI Optical (Model No.: TY-SB01FB) is installed in the slot.

2 The signal with 1/1.001x vertical scanning frequency is also supported.

List of Quad link SDI compatible signals

The following table specifies the dual signal SDI signals that the projector can project.

Requires TY-SB01QS Interface Board for 12G-SDI Input.

- The content of the 4K division column is as follows.
-SQ: Square (transmission format of Square Division) -IL: Interleave (transmission format of 2-Sample Interleave Division)
- The content of the signal type column is as follows.
-V: Video signal
