Mobile Softphone

Seamless.

Secure.

Simple.

The freedom to increase
productivity and control costs with
Panasonic Mobile Softphone

cost-effective

Connect every employee with complete control

Would you like to increase productivity by connecting your remote-working employees to your office communication systems?

Are you looking to replace an old, outdated phone system with something far more cost-effective? A solution that makes use of your employees' smartphones perhaps?

And would you like to do it all with minimal stress and maximum simplicity and security?

If the answer to these questions is 'yes', then you should take a closer look at the Panasonic Mobile Softphone.

It's a seamless, simple and highly secure application that combines audio and visual communications in a mobile device, allowing employees' smartphones to be registered as a company extension.

So whether they're working in or out of the office, employees can make and receive audio and video calls without needing to use their private number.

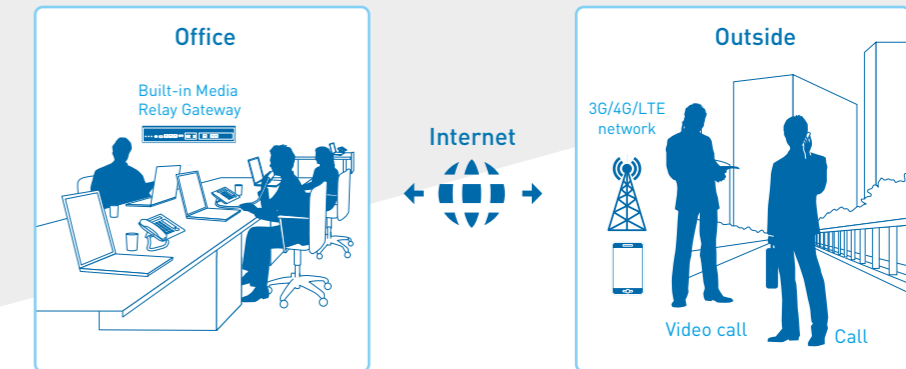

Where freedom makes a positive contribution to our world

The beauty of the Mobile Softphone is that it gives your teams the freedom to use the smartphones they're already comfortable with, meaning they're more productive than ever. And it gives your business the freedom to work in the most flexible, responsive and cost-effective way possible.

Not only that, it follows the Panasonic ethos of making a positive contribution to society. By providing previously unachievable levels of flexibility and 'work anywhere' capability, it's helping to streamline the working world, at the leading edge of a new generation of ease and efficiency.

Combining audio and video

Compatible with all KX-NS, NSX and NSV Series systems, the application supports both audio and video calls, with a built-in Media Relay Gateway (MRG). Your communications are carried out over your company network.

As well as mobile-to-mobile video conversation, users can also connect to IP video doorphone devices (such as Panasonic KX-NTV Series) to view visitors in real-time and also to grant access to site.

Or connected with Panasonic KX-HDV430 Video Terminals and three-party video conferencing capability is also possible enabling remote video collaboration with complete clarity.

Enjoy seamless connectivity with a PBX extension

With Panasonic Mobile Softphone, you can use your smartphone as a company extension.

The application also supports push notification – so even when it isn't started up, you'll receive a notification whenever you have an incoming call. Not only does this mean you need never miss a call, it's also an effective means of saving battery consumption.

For additional versatility and seamless performance, you can set two IP addresses to allow your users to connect to the right network, whether they're in your company WiFi network or an outside alternative.

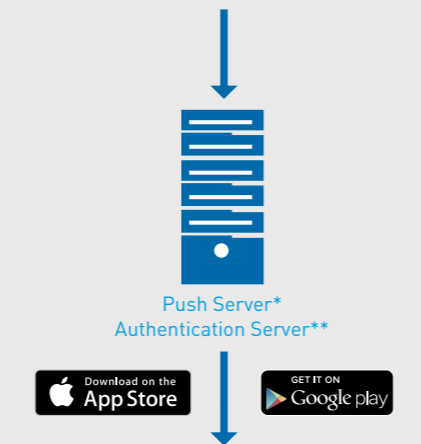

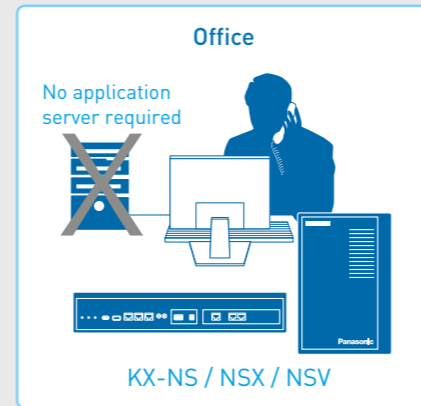

Reassuringly secure

We understand how important security is to you and your business. So the Panasonic Mobile Softphone supports SIP-TLS (Transport Layer Security). With this technology, potential risks are absolutely minimised, as hackers can't view the SIP communication data and are unable to access your network.

For even greater security, when the application detects a non-Panasonic SIP extension trying to log in, it can reject the connection. If it's more convenient and appropriate for you, this functionality can be disabled.

The easiest of installations

Getting started with the Mobile Softphone couldn't be easier. You simply download the app free of charge from the App Store or Google Play, and apply your chosen settings. Once the PBX is prepared for connection, there is no additional or complex server requirement.

* Push notification and authentication server are provided free of charge by Panasonic.

Panasonic Mobile Softphone in action

Perfect for new small businesses

A young manager has recently established their small business and opened a new office. With only six employees, he wants to minimise his communication set up costs and any disruption to his business.

As mobility is important to his business, he needs to be able to use the company phone number whether in or out of the office – but also needs this capability to come at a low cost.

The Panasonic Mobile Softphone is the ideal solution. It allows a smartphone to be used as a company extension, even out of the office, so there are no interruptions to communications. This allows work to be carried out with the speed and agility that a small business demands.

Equally, cost is never a problem, as the app is easy to install on employees' smartphones, meaning new phone technology isn't needed.

Ideal for IP PBX users

An Information System Administrator looking to increase productivity by enhancing mobile connectivity – without the need for more server room space or network capacity – also finds the perfect solution in the Panasonic Mobile Softphone.

The application represents a 'serverless' solution, with the company's communication infrastructure being used as it is, with no additional equipment needed.

Perfect for new small businesses

The right solution for shop owners

With only a few employees, and often finding herself working away from her shop, the owner of a small retail business needs to stay in touch with her part-time staff and respond to customer enquiries at all times.

Designed specifically for smaller users groups, the Mobile Softphone is the right answer. With the application, the business owner can be contacted anywhere or at any time, ensuring excellent communication with staff, suppliers and customers.

Meeting the needs of manufacturing businesses

Travelling back and forth between the office and factory every day, the plant manager of a manufacturing business wants to tighten the communication links between the two locations.

The business has around 50 employees, so the manager needs a solution that can ensure smooth communications between its offices and external premises. The Mobile Softphone is the ideal way to achieve that.

Using the video calling capability, the application also allows remote training, as the manager can share images with employees without needing to visit the plant. And thanks to the system's exceptional security, sensitive business information is never at risk.

Using the Mobile Softphone

Dial pad

Standard, easy-to-use dialling screen.

In/Out call log

You can check the In/Out Call Log for calling assistance.

Voice call

The simple, easy-to-use screen lets you control speakers, the mute feature, and other functions.

Video call

The dual-window display for both you and the person you are talking to makes it easier to discuss details.
