0402 part land

According to the correction data of shifted printing positions analyzed by solder paste inspection equipment (APC correction data), it corrects printing positions (X, Y, θ).

*Solder inspection equipment of other companies can also be connected.

* Please inquire with your sales representative for more details.

The following functions can be supported by connecting with an upper system (LNB, LWS...).

- Automatic changeover
- Component verification (solder / mask / squeegee...)
- Trace data output

*About the specification and system configuration, please refer to the specification booklet for details.
