

When battery life means others give up, **TOUGHBOOK** users are just getting started.

The challenge

65% of mobile workers

say their batteries frequently don't last the full shift¹

80% of IT leaders

admit to needlessly replacing healthy batteries²

TOUGHBOOK batteries are optimised for long life (and long working days), so your devices can be used across multiple shifts and multiple workers.

With optional hot-swap functionality, you can switch batteries without powering down or losing work.

TOUGHBOOK batteries are designed to keep up with the power-draining apps used by field workers.

Light and ergonomic, they're rugged too (of course), so you can take your devices anywhere more easily.

Our solutions

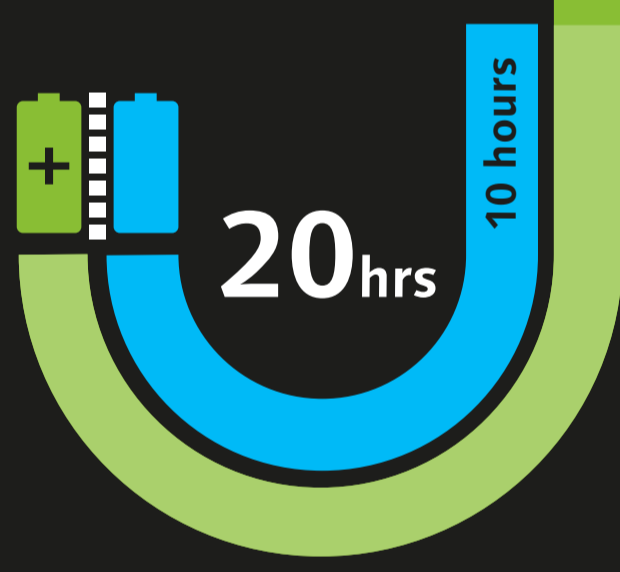

PROSERVICES

Battery Confidence, our proactive battery replacement service, will remotely monitor the performance of your fleet to ensure user productivity is never impacted.

TOUGHBOOK batteries last up to 10 hours

2nd battery can extend that to 20 hours

MobileMark 25

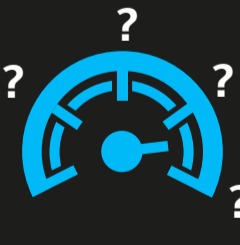

Bespoke battery performance configuration

No mobile environment is the same. Our technical teams will work with you to create a bespoke battery configuration to maximise performance for your users.

Whatever the work, wherever it takes you

Your team will always be able to communicate, access critical info and report in real-time when on the move.

Battery performance is only as accurate as its testing.

That's why we've upgraded to the latest, more realistic MobileMark measurements.

Work harder.
Go further.
For longer.
