The Connected Worker

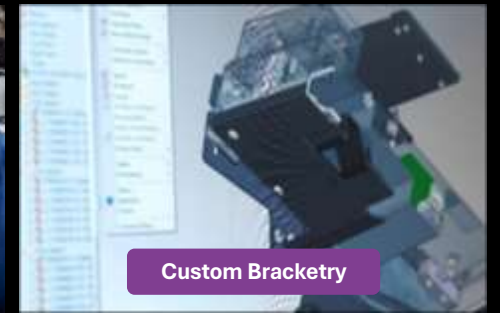

Users need access to critical information while on the move.

Panasonic Vehicle Integration

Work with our partners to enhance their workers to be more connected

For all vehicle installations, we provide:

1. Solution consultancy based on use case, vehicle and customer type
2. Full vehicle integration design service, including custom bracketry
3. Representative demo installations
4. Coordination and training of installation partners, as required
5. TOUGHBOOK approval for all solution elements
6. Stress analysis and full vehicle safety testing

Best Practice and Relevant Standards

- Panasonic have developed and apply industry best practices to vehicle equipment design, installation, and reinstallation.
- Panasonic work closely with MIRA for compliance with relevant safety requirements
- Products are specially selected and/or designed for the vehicle environment using automotive standards where possible, or Panasonic internal design standards where no relevant automotive standard exists.

Panasonic have partnered with the Department of Health and a consortium of solution providers to deliver an all-encompassing integrated vehicle solution.

What does the future of In-Vehicle Integration look like?

THE SET-UP

Output Control

Built-In
Screen

Screen Mirroring
Technology

Rugged
PC

Vehicle Technology

Screen Mirroring

Job Dispatch/Acceptance

The in-vehicle solution must give the user the ability to accept/reject jobs whilst sitting in the driver seat

Incident Control

Users must have the ability to centrally control incident management, view specific information and communicate with their teams effectively

Route Navigation

The TOUGHBOOK has typically been used for Sat Nav so the new system must display this in an efficient manner

Job Information

Any system that can proactively communicate job information whilst the user is driving to job will improve efficiency. This must be in a compliant way

Vehicle Equipment Control

Users require the ability to control other critical equipment from the OEM display such as light bars, sirens and radio communications

Screen Mirroring

Benefits- Why VNC Automotive?

Space-efficient in-vehicle mounting

Mounting of the TOUGHBOOK in the back of the vehicle while ensuring continued access to key TOUGHBOOK functionalities allows for more available space in the front of the vehicle

Compliant in-vehicle use of digital functionalities

Integration of the TOUGHBOOK with the in-vehicle OEM display allows the field worker to receive jobs, accept/reject jobs, view vital job information and gain access to application-based satellite navigation

Reduced complexity with installation and maintenance

Safety regulation-compliant design and installation of all required components into your vehicles, while supporting you with the maintenance of the solution along the lifecycle

Ability to create second screen

Whilst the current TOUGHBOOK device can remain docked in the front of the vehicle, the OEM display can be used to display more critical information to support the user

Please speak with us to help support a
better-connected worker

Thank You

The background features several thick, flowing blue lines that curve across the black field, creating a sense of motion and depth. These lines are positioned primarily in the upper and lower portions of the frame, framing the central text.
