1 Measurement, measuring conditions, and method of notation all comply with ISO/IEC 21118: 2020 international standards.

2 Average light-output value of all shipped products measured at center of screen in [NORMAL] Mode.

3 When the ET-D3LES250 is attached and the power supply voltage is AC200-240V.

4 Around this time, light output will have decreased by approximately 50%. Dynamic Contrast [3], under conditions with 35°C (95°F), 700m (2297ft) above sea level, and 0.15mg/m<sup>3</sup> of particulate matter. Estimated time until light output declines to 50% varies depending on environment.

5 This is supported when the optional DIGITAL LINK Terminal Board (Model No.: TY-SB01DL) is installed in the slot.

6 Compatibility is maintained even when a 12G-SDI terminal board (model: TY-SB01QS) or a 12G-SDI optical function board (model: TY-SB01FB) is installed in the slot.

7 This is supported when the optional Function Board for 12G-SDI Optical Function Board (Model No.: TY-SB01FB) is installed in the slot.

8 Average value. May differ depending on the actual unit.

9 The operating environment temperature should be between 0°C (32°F) and 40°C (104°F) if the projector is used at an altitude between 1,400m (4,593ft) and 4,200m (13,780ft) above sealevel. Note that altitude of 4,200m (13,780ft) above sea level is the maximum height that the performance of this projector is guaranteed.

The operating environment temperature should be between 0°C (32°F) and 40°C (104°F) when the optional Wireless Module (Model No.: AJ-WM50 Series) is attached. Additionally, if the projector is used at an altitude of less than 2,700m (8,858ft) with the operating environment temperature of exceeded 35°C (95°F), or at an altitude between 2,700m (8,858ft) and 4,200m (13,780ft) with the operating environment temperature of exceeded 25°C (77°F), the light output may be reduced to protect the projector.

10 The type and number of the supplied power cords vary depending on the country or region where you purchased the product.

- 2 The throw ratio is based on the value during projection with the projected image size of 150 in. However, the throw ratio for the following projection lenses is based on the value during projection with the projected image size of 5.08m [200 in]. ET-D3LEU101, ET-D3LEW201

### Calculation of the projection distance

To use a projected image size not listed in this manual, check the projected image size SD (m) and use the respective formula to calculate the value. The unit of all the formulae is m. (Values obtained by the following calculation formulae contain a slight error.)

When calculating the value using image size designation (value in inches), multiply the value in inches by 0.0254 and substitute it into SD in the formula.

1 When [VERTICAL KEYSTONE] and [HORIZONTAL KEYSTONE] are used simultaneously, correction cannot be made exceeding total of 55°.  
 2 Only the vertical keystone correction angle can be corrected in the direction in which the projector body moves away from the screen.

**Note**

- When [GEOMETRY] is used, the focus of the entire screen may be lost as correction increases.
- Make the curved screen a circular arc shape with one part of a perfect circle removed.
- Adjustment range of the [GEOMETRY] items may not match the listed projection range depending on the projection lens. Use this projector within the projection range, otherwise the correction may not work.

**Installable angle**

Install the projector at an angle within the range shown below.

FULL 360-degree projection

Vertical 360-deg.

Horizontal 360-deg.

Tilting 360-deg.  
(Vertical and Horizontal combination)

### Notes on projector placement and operation

- Do not stack three or more projectors.
- Do not use the projector supporting it by the top.
- Do not block the intake/exhaust vents of the projector.
- Prevent hot and cool air from the air conditioning system to blow directly to the intake/exhaust vents of the projector.

- Do not install the projector in a confined space.  
When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.
- When installing and fixing the projector on a ceiling or wall using a mount, make sure that the fixing screw or power cord does not come in contact with the metal section inside the ceiling or wall. Failure to observe this may result in electric shocks.
- Panasonic Projector & Display Corporation. takes no responsibility for any damage to the product caused by an inappropriate choice of location for installing the projector, even if the warranty period of the product has not expired.
- Immediately remove the product that is not in use anymore by asking a qualified technician.

1 This is supported when the optional DIGITAL LINK Terminal Board (Model No.: TY-SB01DL) is installed in the slot.  
 2 The signal with 1/1.001x vertical scanning frequency is also supported.  
 3 YPbPr 4:2:0 format only  
 4 VESA CVT RB (Reduced Blanking) compliant

**Note**

- A signal with a different resolution, including SDI signal, is displayed converted to the number of display dots. The number of display dots is as follows.  
-1920 x 1200
- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
- When the DIGITAL LINK connection is made with the long-reach communication method, the signal that the projector can receive is up to 1080/60p (1920 x 1080 dots, dot clock frequency 148.5 MHz).
- Even if it is the signal listed in the list of compatible signals, it may not be displayed by the projector if the image signal is recorded in a special format.

## List of plug and play compatible signals

The following table specifies the input signals compatible with plug and play. Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector. For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.

- The content of the signal type column is as follows.

## List of 3D compatible signals

The following table specifies the 3D compatible image signals that can be input to and projected by the projector.

This projector supports the signal with ✓ in the 3D compatible signal column.

- Abbreviations for input formats and 3D formats in the table have the following meanings.
  - FP: Frame packing format
  - SBS: Side by side format
  - TB: Top and bottom format
  - FS: Frame sequential format
  - H1-2: HDMI™1 & HDMI™2 input simultaneous format
  - HDMI™/DL: HDMI™/DIGITAL LINK
