

Model ID	NPM-VF	
PCB dimensions	Standard conveyor	Anvil conveyor (Option)
Max. PCB mass ¹	L 50 mm × W 50 mm to L 510 mm × W 460 mm	L 50 mm × W 50 mm to L 460 mm × W 400 mm
PCB thickness	Up to 3 kg	
PCB flow	0.3 to 8 mm	
Insertion direction	Left ← Right / Left → Right (Flow direction is selectable)	
Insertion push force	360° (±180°) *1 degree unit	
Insertion push force	Up to 100 N	
PCB Exchange time	4.5 s	5.5 s
Clinch specifications	—	Clinch angle : 60 degrees outward clinch Cinch pitch : 2.5 to 40 mm Lead bend angle : 10 ~ 40° Lead diameter : φ0.4 mm to φ1.0 mm (soft copper) φ0.4 mm to φ0.8 mm (hard copper / CP wire)
Applicable components	Max. dimensions : L 130 mm × W 35 mm × H 60 mm + L 150 mm × W 38 mm × H 29 mm / Max. component mass : 200 g	
Electric source	3-phase AC 200 , 220 , 380 , 400 , 420 , 480 V 2.7 kVA	
Pneumatic source	0.5 to 0.8 MPa , 200 L / min (A.N.R.)	
Dimensions	W 1 866 mm × D 2 332 mm × H 1 554 mm (Main body only) Note : Excluding the monitor, signal tower and ceiling fan cover. W 2 166 mm × D 2 332 mm × H 1 554 mm (When downstream extension conveyor is connected)	
Mass	2 590 kg (Only for main body : This differs depending on the option configuration)	
Head Configurations		
3-station head	Body chuck + Nozzle + Nozzle	Tact: Max. 0.65 s / component ^{*2,3,6}
	Body chuck + Nozzle + Swing nozzle	
	Body chuck + Nozzle + Lead chuck	
	Body chuck + Swing nozzle + Lead chuck	
2-station head	Body chuck + Body chuck	Tact: Max. 0.9 s / component ^{*2,3}
Component Supply		
Stick	S	Max. component dimension : W 20 × L 80 × H 20 mm / Max. stick width : 24 mm / Max. component mass : 2 kg in total (including stick mass)
	L	Max. component dimension : W 60 × L 80 × H 45 mm / Max. stick width : 64 mm / Max. component mass : 2 kg in total (including stick mass)
Radial tape	Max. body dimension : Max. Φ20 × H 30 mm / Lead pitch : 2.5 / 5.0 / 7.5 / 10.0 mm	
Tray	Max. tray dimension : L 230 × W 335 × D 69 mm / Max. pallets per feeder : 20 / Max. mass : 20 kg (magazine + pallet + tray + components)	
Bulk	*4 Customized spec	
Machine Configuration	Max. number of products to be loaded	
	Stick S	Stick L
	Front	30-slot fixed supply unit ^{*5}
		15
		7
		10

System		
Programming and Software	NPM-DGS · AM-LNB · LNB, Option : PanaCIM, iLNB	
	Note: Max. 3 NPM-VF can be connected to AM-LNB Up to 15 machines of the NPM series (including NPM-VF) or the SP series can be connected to LNB	
Optional functions	Component verification , Traceability , Automatic changeover , Host communication , iLNB line control including other company's machine	
SMT components [*]		
Applicable components	Min. dimensions : L 5 mm × W 5 mm or larger (For tape, embossed tape of 12 mm or larger)	
Placement specs	Head: Nozzle only Placement accuracy : QFP ±0.05 mm (Cpk ≥ 1) Max. tact time : 3 000 cph (per head)	
Supply unit (embossed tape)	Tape feeder width	12 / 16 mm 24 / 32 mm 44 / 56 mm 72 mm 88 mm 104 mm
	30-slot supply unit	30 15 10 7 6 5
	13-slot supply unit	13 6 4 3 2 2

⚠ Safety Cautions

- Please read the User's Manual carefully to familiarize yourself with safe and effective usage procedures.
- To ensure safety when using this equipment, all work should be performed according to that as stated in the supplied Operating Instructions. Read your operating instruction manual thoroughly.

Panasonic Group products are built with the environment in mind.

Electronics Assembly System

Odd-form Component Insertion Machine

Catalogue

2026

Model ID

NPM-VF

Model No.
NM-EJR9A

NPM
NEXT PRODUCTION MODULAR

*It may not conform to Machinery Directive and EMC Directive in case of optional configuration and custom-made specification.

Features and aims of NPM-VF

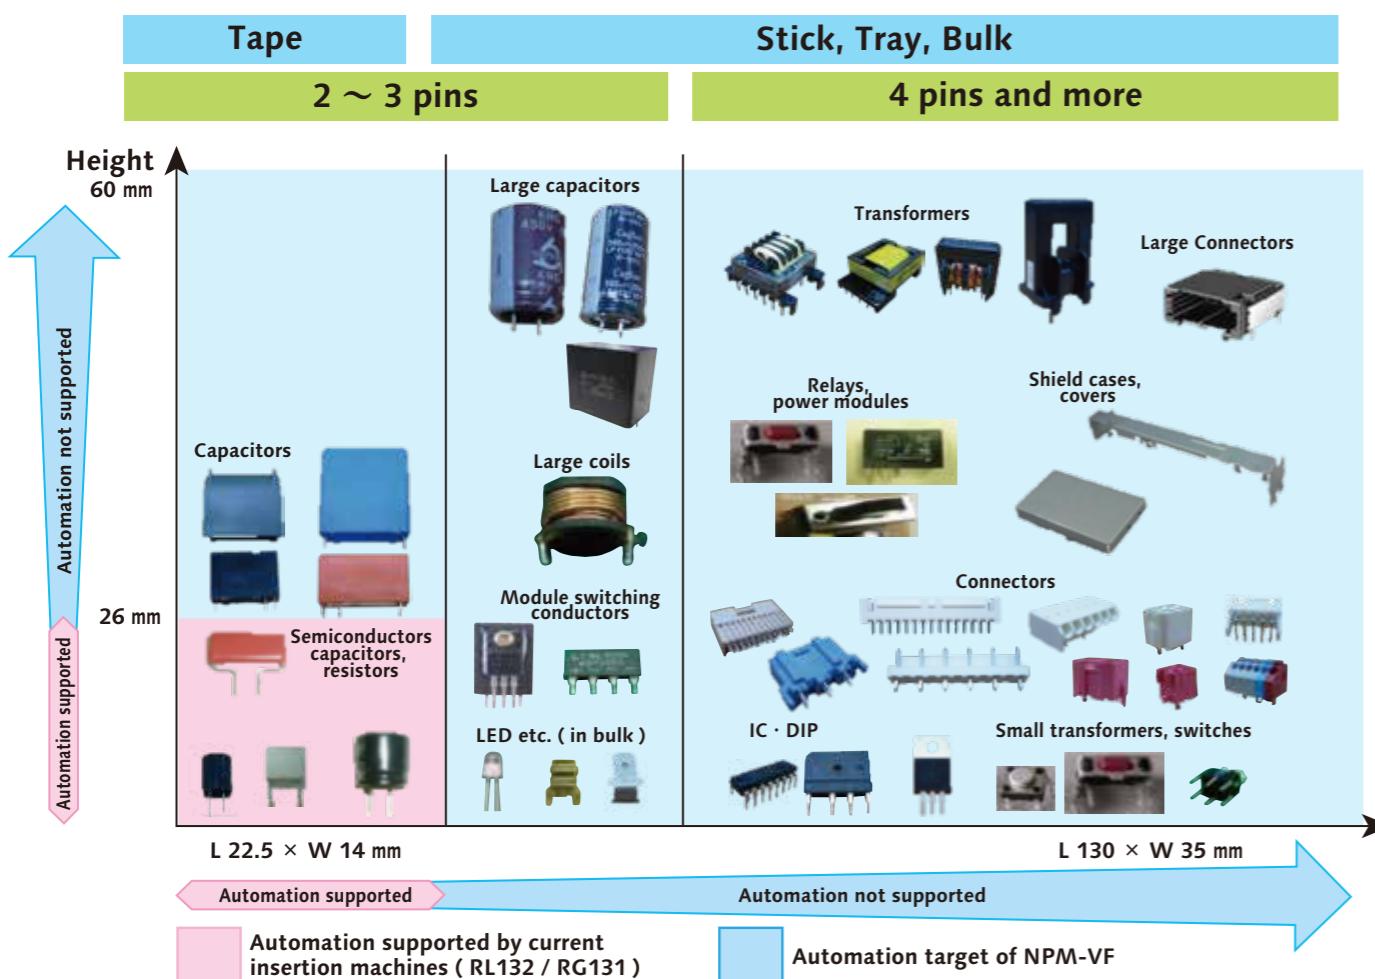

1 Automation of odd-form components insertion process.
In addition, SMT specifications* are also supported.

*supports both SMT placement + odd-form insertion (developing).

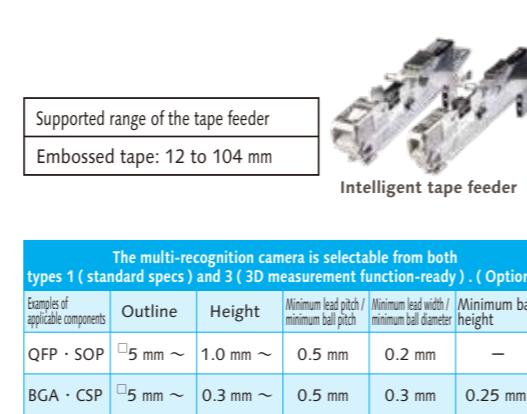

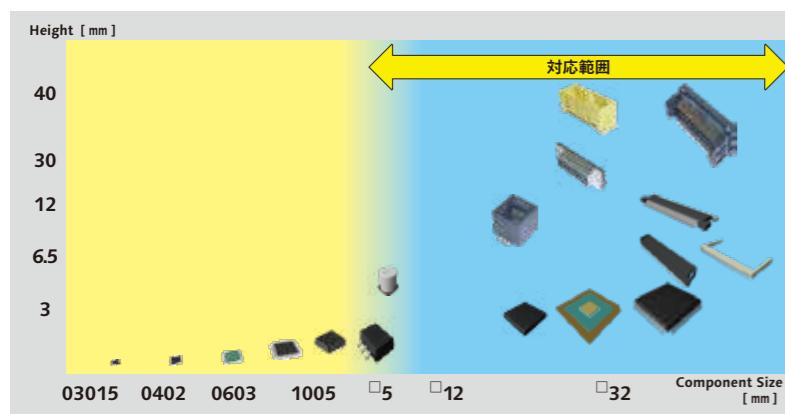

2 Versatile and flexible : various configuration of head tools and machine feeder configuration to adapt to different types of components.

3 Contribute to manpower reduction and stable production with high productivity, flexibility, high quality insertion.

Applicable Components

Support for SMT components

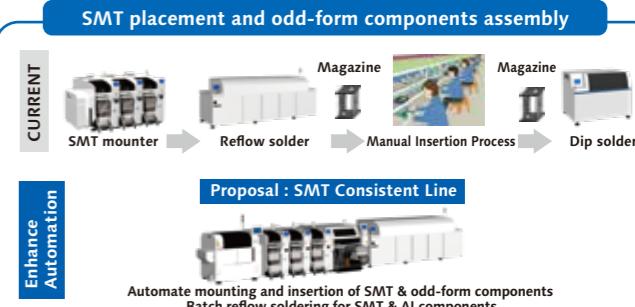

Line Solution

Reduce manual insertion assembly process
Prevent human errors, improve quality.

Convert manual insertion process to SMT inline process
Reduce processes / dip solder investment.

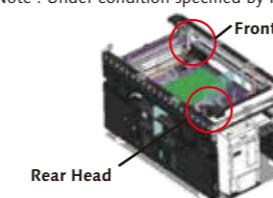

High Productivity

High speed insertion

Maximum tact of 0.65 s* is achieved by 2-beam 2-head structure. Compared to manual insertion, 1 NPM-VF is able to replace 3 to 5 operators. In addition, each head can hold up to 3 tools (chucks, nozzles), enabling effective movement of the insertion heads.

*Note : Under condition specified by Panasonic.

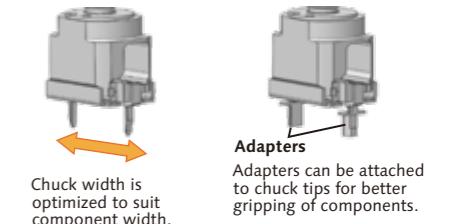

Non-stop Production

【Stackable stick feeder】
Sticks can be loaded during machine operation, reducing machine down time due to component exhaust.

【Tray feeder】
Tray pallets can be replenished during machine operation.

【Variable pitch body chuck】
Motorized body chuck varies chuck opening according to component size, greatly reducing dead space, chuck exchange time and increasing productivity.

Versatility

Various tools to cater to different components

Swing nozzle

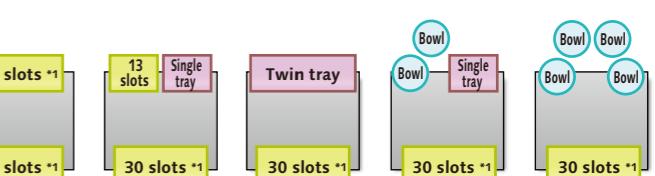

Radial Tape Feeder

Bowl Feeder *

Various component feeding types

Flexible feeder configuration

Quality Insertion

Recognition correction and component inspection function

NPM-VF is equipped with 2 cameras (head camera and component camera) to scan PCB holes, PCB marks and component leads, ensuring high quality and stable insertion.

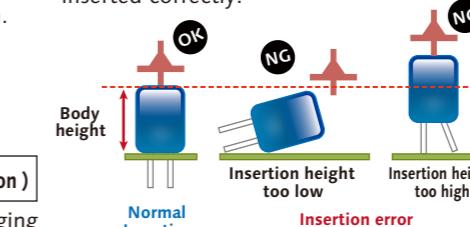

Component verification & Traceability (Option)

Prevents setting mistakes when exchanging parts and supports fabrication history management.

Insertion error detection system

Component height will be detected via sensor after insertion to determine if it is inserted correctly.

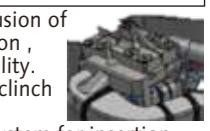

Recovery Operation

In the case of insertion error, PCB will automatically be flowed to the upstream extension conveyor for the operator to remove the error components.

Cut & Clinch Function (Option)

Function : prevent protrusion of components after insertion, improving insertion stability. Features : variable pitch clinch (2.5 to 40 mm) with piezoelectric detection system for insertion errors.

*It may not be possible to detect when component lead is too soft and would not support itself.
